Section 23 4 Leaves

Plants regulate the opening and closing of their stomata to balance water loss with rates of photosynthesis. Stomata are open in daytime, when photosynthesis is active, and closed at night, to prevent water loss. In hot, dry conditions stomata may close even in

23 4 Leaves - Hamilton Local Schools Home

23.4 Leaves Lesson Objectives

Describe how the structure of a leaf enables it to carry out photosynthesis.

Explain how gas exchange in leaves relates to homeostasis. Lesson

Summary Leaf Structure and Function

The structure of a leaf is optimized to absorb light and carry out photosynthesis.

Online Library Biology

Section 23 4 Leaves

Leaves are made up of the three tissue systems. □ Leaves are covered on their top and bottom surfaces by epidermis. The epidermis of nearly all leaves is covered by a waxy cuticle, which protects tissues and limits water loss. □ The vascular tissues of leaves are connected directly to the vascular tissues of stems.
