Written by a pair of math teachers and based on their classroom notes and experiences, this introductory treatment of theory, proof techniques, and related concepts is designed for undergraduate courses. No knowledge of calculus is assumed, making it a useful text for students at many levels. The focus is on teaching students to prove theorems and write mathematical proofs so that others can read them. Since proving theorems takes lots of practice, this text is designed to provide plenty of exercises. The authors break the theorems into pieces and walk readers through examples, encouraging them to use mathematical notation and write proofs themselves. Topics include propositional logic, set notation, basic set theory proofs, relations, functions, induction, countability, and some combinatorics, including

hits. But for every Wicked or Phantom of the Opera, there are dozens of casualties that didn't fare quite so well. In this book, Julian Woolford explores the musical-theatre canon to explain why and how some musicals work, why some don't, and what you should (and shouldn't) do if you're thinking of writing your own. Drawing on his experience as a successful writer and director of musicals, and as a lecturer in writing musicals at the University of London, Woolford outlines every step of the creative process, from hatching the initial idea and developing a structure for the work, through creating the book, the music and the lyrics, and on to the crucial process of rewriting. He then guides the reader through getting a musical produced, with invaluable advice about generating future productions and sustaining a career. The book includes dozens of exercises to assist the novice writer in developing their craft, and detailed case studies of well-known
