examinations given by the Armed Forces, colleges and graduate schools. These exams enable students to earn college credit for what they have learned through self-study, on the job, or by other non-traditional means. The DSST Physical Science Passbook® prepares candidates for the DSST exam, which enables schools to award credit for knowledge acquired outside the normal classroom environment. It provides a series of informational texts as well as hundreds of questions and answers in the areas that will likely be covered on your upcoming exam, including but not limited to: physics;

This book highlights the essential theoretical and practical aspects of lightning, lightning protection, safety and education. Additionally, several auxiliary topics that are required to understand the core themes are also included. The main objective of the contents is to enlighten the scientists, researchers, engineers and social activists (including policy makers) in developing countries regarding the key information related to lightning and

thunderstorms. A majority of developing countries are in tropics where the lightning characteristics are somewhat different from those in temperate regions. The housing structures and power/communication networks, and human behavioural patterns (that depends on socio-economic parameters) in these countries are also different from those in the developed world. As the existing books on similar themes address only those scenarios in developed countries, this book serves a vast spectrum of readership in developing world who seek knowledge in the principles of lightning and a practical guidance on

and methods of calculation Addresses the alternative uses of coal as a source of energy Covers a global approach to coal producers and consumers

I highly recommend this edited collection. It is a timely intervention when universities around the world are facing changes akin to the newspaper industry a decade ago. The authors remind us of the potential power of the lecture and that there does not need to be a trade off between the size of the class and the quality of the delivery... common environment in Higher Education, then this is the book for you. Written by highly experienced academics, it is a valuable (and long overdue!) resource for supporting good practice in the large class context. Dr Jenny Hadingham University of Rochester, New York

The focus of this publication is on answering the central research question: How can Human Rights be advanced with regard to different kinds of diversities, and in different educational settings? The publication pays special attention to the advancement of human rights in a variety of education-related

contexts, in keeping with human rights as a declared national priority for both society at large and the education system. One strategic priority of the Faculty of Education is research based on market requirements and needs. This book strives towards meeting this expectation by directly aiming at building human rights and social justice in the South African society, public schools and higher education institutions. Adjudication in the education context of the constitutional values of dignity, equality and freedom focusses regularly on learners. The book highlights the value of education

for full-fledged citizenship by delineating what schooling should entail to inspire learners towards both claiming equal freedoms and rights and taking accountability for the responsibilities attached to citizenship.

The main thesis of this book is that, given that South African education faces major challenges, the BRICS (Brazil, Russia, India, China and South Africa) constellation of states offers – thus far overlooked – a valuable tertium comparationis, a source of international comparative perspectives, to inform the domestic scholarly discourse on

education. This book first investigates the national contexts and development of education in the BRICS countries, arguing that this grouping represents a valuable but yet overlooked field for illuminating South African education issues with international perspectives. The book consists of chapters arguing for and illustrating this thesis from a variety of angles. Common to all chapters is that authors used the comparative method in education, that is comparing the national education system, in their education societal context interrelationships, of the BRICS countries. The chapters focus on a number of

critical issues in South African education, including the language of learning and teaching issue, the alignment of the world of education with the world of work, early childhood education, and the development of world-class universities. Regarding the last, for example, China has been the terrain of the most intensive national projects of establishing world-class universities, with Project 985, Project 211, and the “Double First Class University” project. The chapters demonstrate what South Africa, in approaching her education issues, can learn from the experience of the BRICS countries.
