This book is to help foreign medical doctors who immigrate to the US legally to return to practice medicine via medical licensing. It explains in very details all the steps and important issues to help foreign medical doctors to start their saga of medical licensing on their own with DIY- Do It Yourself fashion. Furthermore, I explain the extraordinary work that USFMDs (US citizen foreign Medical Doctors) have to go through this tough process of medical licensing; they have paid very high prices to earn the ECFMG certificate. However, they are currently terribly mistreated. The book reveals the true painful story how USFMDs have been buried alive for the last six decades. USFMDs, especially the ones who graduated and left medical schools over three or more years are of terribly unjust and unable to return to practice medicine even they proved their qualifications and capability to be great physicians for the American public. This is the true story that should be told to every American.

Drs. Vitola and Delbeke assembled a group of standout contributors in order to create a resource that advances the knowledge and skills of experienced nuclear cardiologists and radiologists while also preparing residents for the cutting-edge field of nuclear cardiology. Diagnostic tools, physics and instrumentation, and radiopharmaceuticals and protocols central to the field are examined. The comprehensive text covers key applications of myocardial perfusion imaging, including applications in special populations and in emergency departments. Risk assessment, pitfalls, and artefacts are addressed. Additional chapters detail the value of cardiac MRI, multislice computed tomography, stress echocardiography, and PET and PET/CT to nuclear cardiology. Practical case presentations and a wealth of illustrations reinforce instruction on diagnostic guidelines and methods.

ANA and the American College of Cardiology Foundation convened an array of cardiovascular health experts to develop this succinct and practical guide. This completely updated document is unique, in fact, as a unifying effort due to participation and contribution of 16 nursing organizations whose constituency includes cardiovascular nurses. Reflecting the cumulative work of three previous iterations (and including their content), this book is a foundational volume. It articulates the essentials of the specialty, its accountabilities and activities - the who, what, when, where, and how of its practice - for both specialists and generalists. The standards themselves - six for nursing practice and nine for nursing professional performance - are those by which all nurses in this specialty practice. Together, along with each standard's set of measurement criteria, these reflect the perspectives and priorities of cardiovascular nursing. The book's summary discussion of the scope of such practice - its characteristics, development and trends, education and training, its practice environments and settings, its general and specialized practice roles, its ethical and conceptual bases - lends a broad context for understanding and using these standards. While Cardiovascular Nursing: Scope and Standards of Practice is a reference and guide primarily for practicing nurses and nursing faculty and students, it is also an essential source document
